

Building or fixing up a home?

Learn more about the Vermont Residential Energy Code Requirements.

Energy Code Assistance Center

Toll-free 855-887-0673

The Energy Code Assistance Center is a project of the Vermont Department of Public Service and is implemented by Vermont Energy Investment Corporation.

About the residential code

The Vermont Residential Energy Code — officially called the Vermont Residential Building Energy Standards (VT-RBES) is a minimum standard of energy efficiency that applies to virtually all new residential construction, renovations, alterations, and repairs in Vermont.

Today, VT-RBES requirements represent an increase in energy efficiency that, for the first time, pushes the energy code requirements beyond long held conventional insulation and construction practice. This increase in efficiency will result in a reduction in energy use and lower home operating costs for the homeowner. New air sealing requirements will also lead to homes that are more comfortable to live in.

NEW

Insulation requirements

Thermal performance requirements for many building components, including windows and doors, have changed significantly from the previous energy code. It is important to refer to the RBES handbook for a complete list of thermal (R-values and U-values) requirements.

Free energy code resources

- **Get a free handbook.** The Vermont Residential Building Energy Code Handbook is a home builder's guide to meeting VT-RBES. The handbook provides step-by-step instructions on how to meet the energy code requirements. It puts all the information you need to know about Vermont's Energy Code for residential construction into one publication. Download a copy from the Vermont Department of Public Service website at publicservice.vermont.gov/energy/ee_resbuildingstandards.html or call the Energy Code Assistance Center to request a hardcopy.
- **Call the Energy Code Assistance Center.** The Energy Code Assistance Center provides free technical assistance on how to meet the requirements of the current VT-RBES.

Questions about the Commercial Energy Code?

To get the latest information about the commercial building energy standards visit the website of the Vermont Department of Public Service at publicservice.vermont.gov/energy/ee_commstandards.html. To request a free copy of the commercial energy code, call the Energy Code Assistance Center.

Building to the Energy Code — Path to Success

Follow the steps to meet the code

The energy code applies to:

- all new single family homes (including modular & log homes);
- new multifamily homes (in buildings up to three stories);
- additions, alterations, renovations, and repairs (this only applies to the part of the home being worked on and effect such work has on the energy use of the home and safety of combustion).

Note: There are some exceptions which can be found on page 1 of the Vermont Residential Energy Code Handbook.

Complete the basic requirements

The basic requirements are a list of fixed requirements that are mandatory for all buildings. These include:

- Ventilation & combustion safety
- Air leakage
- Insulation
- Windows
- Lighting
- HVAC equipment

Complete the technical performance requirements

The Energy Code is simple and flexible in the ways a home can meet the technical requirement. You select one of three compliance paths that works best for your design.

Choose a compliance path

- 1. Fast-Track Method.** The simplest approach that allows you to incorporate a prescribed set of features.
- 2. Software Method.** Use your computer with REScheck software to easily analyze almost any design and determine whether any modifications are needed to meet the Code. REScheck software can be downloaded from the Vermont Department of Public Service website.
- 3. Home Energy Rating Method.** This approach gives full credit for air tightness, efficient hot water and space heating, solar orientation, and other efficient features of the home. For more information about home energy ratings, contact Efficiency Vermont toll-free at 888-921-5990

Fill out the paperwork

When a new house, renovation, or addition is finished, the builder or general contractor must complete and sign a Vermont Residential Building Energy Standards Certificate certifying that the home or addition complies with the code.

If a home that is required by law to meet the Energy Code does not comply, a homeowner can seek damages in court.

Post, file and mail the certificate

Post the original, signed VT-RBES compliance certificate on the breaker box door or on the heating equipment. File a copy with the town clerk where the home is located. Finally, mail a copy to:
Vermont Department of Public Service
Planning & Energy Resources Division
112 State Street
Montpelier, VT 05620
