2010 Efficiency Vermont Clothes Washers Eligibility Requirement

Modified Energy Factor (MEF) must be 2.2 or higher.

MEF is a calculation of CuFt Capacity *divided by* the energy Consumed

Energy consumed is the total of: a) the machine's electrical energy consumed, plus b) the hot water energy consumption, plus c) the energy required to remove the remaining moisture in the clothes (in the dryer). A higher MEF means the machine is more efficient.

Water Factor (WF) must be 4.5 or less

WF is a calculation of the gallons of water used for the wash cycle *divided by* the CuFt Capacity of the machine. A lower WF means the machine is an efficient water user.
