Income Eligibility for Residential Households

Residential customers are eligible to receive this benefit if their household income is at or below the income guidelines. Income is defined as the total annual gross income of all family and non-family members living within the household. To calculate income, take the monthly amount from the last one or two paychecks for yourself and the people in your household (before taxes) and multiply by 12. Include all wages, including regular salaries and overtime. If you are self-employed, use the previous month of pretax income and multiply by 12.

All sources of income must be counted from all persons in the household based on anticipated income expected within the next 12 months. Possible types of income include but are not limited to: wages, salary, tips, bonuses or commissions payments, public assistance, social security/SSI, child support, regular gifts, unemployment, income earned on assets (savings, IRA, etc.) and some types of financial aid.
