

# Weatherize your business and save big

## Reduce operating costs, improve comfort and air quality, and more.

For small businesses like yours, insulating and air sealing does more than reduce energy costs. It can also improve indoor air quality, prevent moisture-related issues, and more. You'll have a healthier, more durable facility.

### Benefits of weatherization

**Reduce operating costs.** Reduce heating and cooling expenses year-round by keeping conditioned air inside. Your HVAC system will run more efficiently in a less drafty space.

**Enhance comfort.** Maintain consistent indoor temperatures by eliminating hot and cold spots that can disrupt productivity or customer satisfaction.

**Prevent moisture damage.** Protect your building from costly structural damage caused by mold, ice dams, or water intrusions.

**Reduce noise.** Dampen sound from outside or between rooms to create a quieter, more focused atmosphere.

**Improve indoor air quality.** Minimize airborne pollutants by sealing gaps and cracks that allow dust, pollen, and other contaminants to enter. This supports better respiratory health for everyone in your building.

### Financial Support

**Weatherization rebate.** Efficiency Vermont has a rebate to help make your project more affordable. See details at <https://www.efficiencyvermont.com/rebates/list/building-performance>.

**Low-interest financing.** Get in touch to discuss an affordable, flexible financing option for your weatherization project. See details at <https://www.efficiencyvermont.com/services/financing/businesses-and-institutions>.

### Impact

This project has proved that you actually can do it all: Reduce your carbon footprint, save money and energy, and have a successful business.

- Steve Bryant, Co-Owner, The Publyk House Restaurant in Bennington
