Electric Vehicle Dealer Program

Limited-Time Offer: Special Incentive for DC Fast Charger

Efficiency Vermont is offering a special, limited-time incentive of 90% of project costs*, up to \$75,000 per project, to five (5) EEN EV Dealers who install a DC Fast Charger (DCFC) at their dealership. Incentive applications must be submitted to Efficiency Vermont by 12/1/2021. Projects will be considered based on the date that the application is received, as well as geographic location of the dealership (striving for equal distribution throughout the state as much as possible).

Project Requirements

- DCFC equipment must provide DC charging at 25 kW power or greater through a SAE CSS and/or CHAdeMO plug.
- Application received by 12/1/2021
- Dealer must be able to have equipment installed and operational by 6/1/2022.

Project Guidance

- Dealers should inform their electric utility about the project, as some utilities may be able to provide additional support if the project meets certain requirements. Efficiency Vermont can help connect dealers with their electric utility.
- New car dealers should check with their automaker franchisor on any specific recommendations or requirements associated with DCFC equipment, as well as any support the franchisor may be able to offer for charging installs. (Costs covered by automaker are not eligible for incentive.)
- Dealers may want to consider equipment that is Open Charge Point Protocol (OPCC)-compliant.
- Dealers may also want to consider equipment with more than one port to charge two cars simultaneously and/or expand availability of charging to include both SAE CCS and CHAdeMO equipped electric vehicles.
- Public access to the DCFC is strongly recommended but not required.

Visit www.encyvermont.com/trade-partners/technical-resources for the following resources:

- **EV Readiness Incentive form.** Please use this form to apply for the DC Fast Charger special incentive. See form for full terms and conditions and submissions instructions.
- **EV Dealer Program EVSE Installers.** Looking for an electrical contractor for your project? These EVSE Installers are available to help EEN EV Dealers with charging station installations and can provide cost estimates for your project.

Note: EEN EV Dealers who are not selected for a DCFC special incentive can still receive the standard incentive of 50% of project costs, up to \$20,000, for their project.

*Eligible project costs include DCFC equipment, installation costs, utility upgrades, DCFC signage, warranty and/or software costs. Costs covered by automaker or utility are not eligible for incentives.
